Don't forget that all product information, including pump schematics, product catalog, how-to videos, customer photos, plus much more are just a click away at www.cds-johnblue.com.

Farm Show Season is in full

swing. Please contact the sales department for the most updated product catalogs. Growers are interested in the new, exciting Liquid Blockage Monitor System (LBMS).

Price Update: The correct price for #113633-01—Large Eccentric is \$87.55. Please update your pricing.

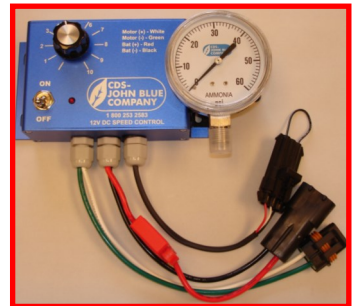

NEW CDS-John Blue Upgraded 12-Volt Speed Controller

We have taken our customers' comments and incorporated them into a brand new **12-Volt Controller**. You asked for an upgraded unit and here they are:

- Accurate and smooth control over a wide range of RPM's.
- Smoother adjustment of pump flow/pressure, which results in reduced sensitivity at the top of the adjustment scale.
- Stand alone gauge option.
- Easily readable digital display.
- Better wiring connections.

- Standard run/hold on 35 amp units.
- On/off control switch with power indicator lamp
- Greater amp capacity through better design—all at a competitive price.

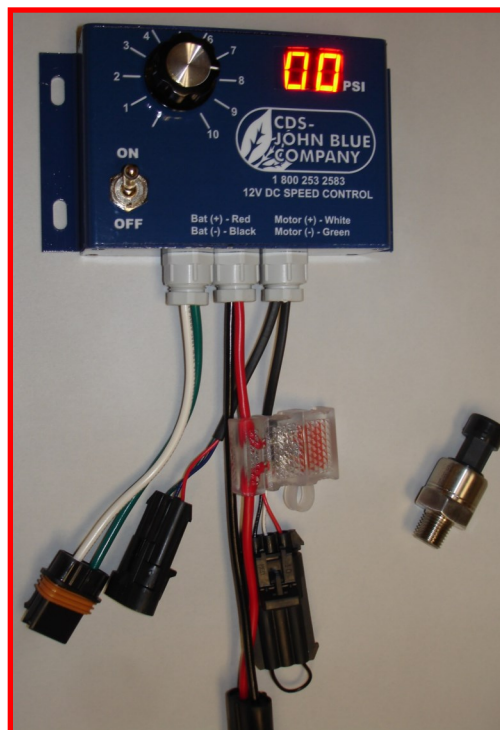

The CDS-John Blue 12-Volt Controller is available in 15 and 35 amp models. A stainless steel

ammonia pressure gauge is available as an option with or without a plumbing kit. It can be mounted either outside of the cab or onto the control box with the provided bracket (photo above).

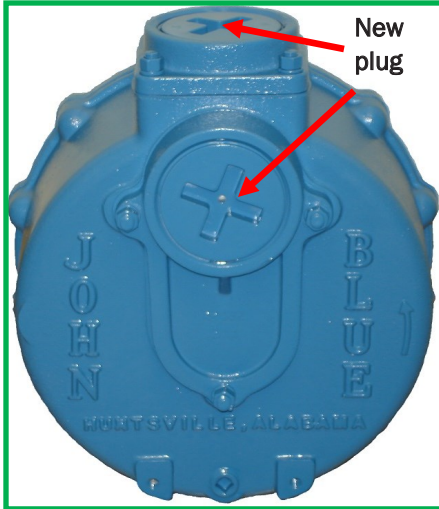

The 35 amp unit is available with a digital display (left photo), which keeps pressurized fertilizers or chemicals out of the tractor cab. The remote stainless steel sensor has a 1/4" NPT male fitting and uses a 20 foot wiring harness. The 35 amp control comes standard with run/hold feature, which can be wired to your implement lift switch using a whisker or proximity switch.

All CDS-John Blue 12-Volt Controllers are backed by a 1-year warranty. For more information visit our web site at: www.cds-johnblue.com.

Product Update

Centrifugal Pump Enhancement

We have added a new plug to our complete line of centrifugal pumps, including threaded and flanged adapters. The addition of the plug will help to stop the pump boxes from getting damp in shipping. Each and every CDS-John Blue Centrifugal Pump is tested before they leave our facility. Sometimes it is difficult to drain all of the liquid out of the pumps before shipping. The new plug will resolve this issue, while insuring the integrity of the pump threads and box for shipping.

CDS-John Blue Employee Anniversaries

Please join us in congratulating the following employees for reaching significant milestones at CDS-John Blue Company. We greatly appreciate their dedication and enthusiasm for their jobs. We wish them continued success for many years to come!

- John Chunn 10 Years
- Felix Marquez 40 Years
- Kelli Smith 15 Years
- James Stephens, Jr. 10 Years

The Best Liquid System on the Market Today Starts with a CDS-John Blue Piston Pump

The most reliable liquid fertilizer system on the market today is simple. It starts with the **CDS-John Blue Piston Pump** coupled with a **Flow Divider** for equal distribution. Simply add the

VisaGage II to monitor your flow or upgrade your VisaGage with the new **Liquid Blockage Monitor System (LBMS)**. Finally add the serviceable in-line **Check Valves** to stop unwanted dripping at your application point. It's that simple!

Our piston pumps are built to last, engineered for performance and because of that you can couple an existing or new pump to our **Variable Rate Hydraulic Drive System (VRH)**. Our VRH Kits (photo left) are ideal for variable rate applications and sectional shut-off. Plus they fit your current electronic systems, John Deere®, Dickey-john® and Raven® to name just a few.

If your grower wants a **Ground Drive System (DRV)**, our DRV's are a good choice and they come with standard

sprockets and mountings that fit most applicators and planters. A piston pump allows for quick and stable adjustments to application rates, plus your rate will not change with the temperature or lack of head pressure.

The new **Liquid Blockage Monitor System (LBMS)** enables your grower to know their flow

from the tractor cab, shows both low and no flow. Two options are available: iPad wireless system (above) or standard wire control panel.
