SAFETY PRECAUTIONS

- Equipment should be operated only by responsible people.
- A careful operator is the best insurance against an accident.
- Fill system with WATER first and check output.
- Check all valves, fittings, hose clamps, etc. for wear/leaks before admitting process fluid to the system.
- Replace hoses when worn, cracked, or if leaking.

WARNING: USE OF THIS PRODUCT FOR ANY PURPOSES OTHER THAN ITS ORIGINAL INTENT, ABUSE OF THE PRODUCT, AND/OR MODIFICATION TO THE ORIGINAL PRODUCT IS STRICTLY PROHIBITED BY CDS-JOHN BLUE COMPANY. CDS-JOHN BLUE COMPANY RESERVES THE RIGHT TO DENY WARRANTY OR LIABILITY CLAIMS IN ANY/ALL SITUATIONS INVOLVING MISUSE, ABUSE OR MODIFICATION.

THE ORIGINAL INTENT OF THIS PRODUCT DOES NOT INCLUDE USE WHERE THE MAXIMUM ALLOWED SPEED, PRESSURE, OR TEMPERATURE IS EXCEEDED, AND IT DOES NOT INCLUDE APPLICATIONS UTILIZING FLUIDS THAT ARE NOT COMPATIBLE WITH THE PRODUCT’S COMPONENT MATERIALS. DO NOT USE THIS PRODUCT WITH FLAMMABLE OR COMBUSTIBLE FLUIDS SUCH AS GASOLINE, KEROSENE, DIESEL, ETC..., AND DO NOT USE IN EXPLOSIVE ATMOSPHERES. FAILURE TO FOLLOW THIS NOTICE MAY RESULT IN SERIOUS INJURY AND/OR PROPERTY DAMAGE AND WILL VOID THE PRODUCT WARRANTY. IF IN DOUBT ABOUT YOUR APPLICATION, CONTACT YOUR STOCKING DEALER OR THE CDS-JOHN BLUE TECHNICAL STAFF AT 1-800-253-2583.

To The Owner

This manual has been prepared and illustrated to assist you in the maintenance of your CDS – JOHN BLUE drive. Enter your serial number and the date of the purchase in the space provided below for future reference in service information or for ordering parts. Because our engineering department is constantly improving products, we reserve the right to make design and specification changes without notice.

** Note: Greenstar™ name and logo(s) are property of Deere & Company, Moline IL.**
INTRODUCTION

Kit Description:
The John Deere GS2/3 control interface kit provides the necessary custom components for, and instructions on how to install, a CDS-John Blue Variable Rate Hydraulic Drive onto an existing John Deere CANbus Planter using the Greenstar™ display/control system. There are two versions of this kit: a single section kit (#VRH-JD-10) and a multi-section kit (#VRH-JD-15).

Some “off the shelf” components (that the user may already have) will still need to be obtained to complete the installation, and they are listed on the next page. The components may be obtained from the supplier listed, or an equal to them may be found.

Installations on other CANbus wired equipment may be possible, but there may be extra parts and tasks required beyond what is detailed in this manual in order to complete the system.

INSTALLATION

Hydraulic System (also see supplied manual #12-M-54 for more installation details):

To reach full pump rpm, the hydraulic system must supply at least 9.5 gpm to the manifold inlet port, and be capable of developing at least 1600 psi. The maximum gpm and pressure should not exceed 10 gpm and 2750 psi.

Adjust your maximum flow output to 10 gpm, use an in-line bypass valve, or install a flow limiting device. A 1/8” orifice plate, #116377-01, is available that slips in the inlet port before the inlet fitting is installed. The orifice plate may be drilled if the resulting flow is too low. 10 gpm should not be exceeded to keep from spinning the pump above its maximum rpm.

As supplied, the system is compatible with a closed center load sensing hydraulic system, which compensates for flow and pressure. If you have a closed center pressure compensating system, you may have to put an orifice (1/8” diameter #116377-01 is available) in the inlet port of the manifold to make the variable stroke pump build pressure. Both of the systems above have a flow control valve to limit flow.

An open center hydraulic system will require the use of a flow bypass valve or limiter if the flow is too high, since this system uses a constant flow pump. Note that care must be taken to avoid overheating the oil when bypassing a large volume of it for long periods of time.

A dedicated hydraulic circuit for the pump drive is ideal, but if no more connections are available you may connect (one drive max.) to the CCS fan circuit on Deere planters. (The manifold automatically bypasses excess flow to the outlet port.) Find the line out of the CCS fan motor going to the oil cooler, run it to the pump drive inlet, and run the outlet back to the cooler.

If you do not want the manifold to allow pass-thru flow, cavity plug #116378-01 may be used to replace the logic valve located near the Tank port of the manifold (see page 7 of manual 12-M-54).

See manual 12-M-54 for the required motor rotation direction.

For Power Beyond™ systems, some manifolds are equipped with a plugged “LS” port that you may unplug and connect to the sensing circuit. You must install a check valve (such as Vonberg #1104R or 1904R) in the port, and then run a hose to the sensing circuit. The port is #4 SAE o-ring.

For power beyond, must install check valve before hydraulic line (to only allow outflow from port)
**Required Components:**

The following list details the key components, in addition to the Variable Rate Hydraulic that are necessary to use the drive with an existing John Deere Greenstar™ display/control system:

Included with CDS-John Blue VRH-JD-10 Single Section Kit:

<table>
<thead>
<tr>
<th>Item</th>
<th>Qty</th>
<th>Description</th>
<th>Mfg. &amp; Part Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>1</td>
<td>Standard single section harness kit - PWM</td>
<td>CDS-John Blue #116046-01</td>
</tr>
</tbody>
</table>

Included with CDS-John Blue VRH-JD-15 Multi-Section Kit:

<table>
<thead>
<tr>
<th>Item</th>
<th>Qty</th>
<th>Description</th>
<th>Mfg. &amp; Part Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>B</td>
<td>1</td>
<td>Multi-section (2 to 7 sections) harness kit</td>
<td>CDS-John Blue #116080-01</td>
</tr>
<tr>
<td>C</td>
<td>1</td>
<td>PWM valve adapter harness</td>
<td>CDS-John Blue #116085-01</td>
</tr>
</tbody>
</table>

Required items that must be purchased separately:

<table>

<td>1.0 psi check valve (qty depends on # of rows)</td>
<td>CDS-John Blue #CV-1101-xxx</td>
</tr>
</tbody>
</table>

Optional parts for special applications:

- Older non CAN-bus machines will require a CAN backbone harness (John Deere #PF81131)
- 2008 and older machines will require a CAN front ext. harness (CDS-John Blue #116090-01)
- 2010 and older tractors will require a constant power harness (CDS-John Blue #116091-01) for the foot switch
- On split row machines, an extended lift arm bracket is required (Deere #A85358)
**Fertilizer System Plumbing:**

The following diagram shows a typical single section variable rate setup using a hydraulically driven CDS – John Blue piston pump, using a single flow divider.

![Diagram of single section system](image)

The following diagram shows a multi-section system, using multiple adjustable flow dividers:

![Diagram of multi-section system](image)

**Notes:**

- When using a tank agitator circuit, the amount bled off to the tank will reduce the max flow capability of the pump by the same amount.
- Section control will require the purchase of optional wiring harnesses and the correct number of 3-way valves, adjustable flow dividers, etc... to complete the system.
- The adjustable flow dividers will need to be calibrated at installation by using flow meters or a visual flow monitor system to compare each section's output flow. This is to be completed at system setup – reference the instructions supplied with the flow divider.
- It is recommended that the lines going to each row out of the flow divider be equal in length, and all coiled-up extra line be laid flat.
Harness Connections:

The following figures and instructions detail the necessary connections for these harnesses. Be sure to read the special notes at the bottom of page 4 which give details about extra harnesses that older planters/tractors will need.

A. Mount the rate controller in a protected location on the planter (under stairs is common).

B. Connect the rate controller harness (supplied with rate controller) as shown below:

- a. Short CAN cable plugs
  Connect to terminator (one plug will be unused).
- b. Long CAN cable plugs
  Connect to planter harness after removing terminator.
- c. Rate controller plugs
  Connect the three plugs to rate controller.
- d. 37 pin connector
  Connect to section harness
- e. 2 pin plug
  Connect to height switch

C. Install the foot switch (supplied with rate controller) in the cab by connecting it to the constant power harness. See the special notes at the bottom of page 4 about this harness.

D. Section control harness
1) VRH-JD-10 Single section harness (116046-01) connections:

- a. 37 pin connector
  Connect to rate controller harness
- b. Flow meter
  3-pin plug with male housing
- c. EPD enable plug for 12volt motor controller
  2-pin plug with single wire and female housing
- d. PWM flow control valve
  2-pin plug with male housing (note label on wire)
- e. Bypass valve
  2-pin plug with male housing (note label on wire)
2) VRH-JD-15 Multi-section harness (116080-01) and PWM adapter harness (116085-01) connections:

Notes:
- Only one flow meter input can be used at this time with the Greenstar™ system
- Pressure sensors may be used with the Greenstar™ system, use a Raven #422-0000-090 or equivalent sensor (16mv/psi calibration)
- The flow control valve is the lower valve in the manifold, near the inlet port:
  - Tank port
  - Bypass (ON/OFF) valve (has longer nut on coil)
  - PWM flow control valve
  - Logic flow control valve
  - Inlet port
Control Configuration:

The Greenstar™ control needs to be configured to work with the valves and flow meter in this system. The following instructions detail the necessary inputs:

A.  
Select the GS2 Rate Controller icon from the main menu

B. 
Select the Setup button (arrow icon) to display the setup menu tabs

1  
Select the Implement tab
   - Select the implement type, and add a name and size to help identify the setup later when navigating the menus
   - Enter your implement section and swath width information
   - The height switch drop down box is normally set to “Do not share” (see special notes)

2  
Select the System tab

PWM flow control valve setup instructions:
   - Enter the information as follows:
     
     Section Valve type = 3-wire (for Banjo, Raven, & Teejet valves)
     Control Valve type = PWM
     Tank Capacity = Enter your value, default is 1000 gal.
     Flow Return box = NOT checked
     Constant Flow box = NOT checked
     Flowmeter Calib. = 72 (for Microtrak FM270, 720 for some Raven) *Number needs to be verified with catch test.*
     Flowmeter Units = gal (for Microtrak, “10 gal” for some Raven)
     Agitator Valve box = NOT checked (unless equipped)
     Pressure Sensor box = NOT checked (unless equipped)

   - Press the “PWM Setup” button and enter the following:
     Control Valve Calibration = 6533
     Coil Frequency = 300
     High Limit = 255
     Low Limit = 57
     Pump Enable Checkbox = CHECKED
     Enable Pump = CHECKED

3 
Select the Alarms tab
   - Setup as necessary for your system
4  Select the Rates tab
   • Input your desired rates
   • Set the Minimum flow rate to 1.0 gpm
   • Set Rate smoothing to an initial setting of 6. *The allowed range is 3 to 15, and you will have to adjust based on your machine and field conditions.*

5  Go back to the GS2 Rate Controller screen and set the rate box pull-down box to your desired setting

C.  Select the Diagnostics Button (wrench icon) to display the diag. menu tabs

1  Select the Readings tab, and use the drop-down menu to verify the following:
   • Hardware/Software – verify the software version is 3.00 or greater. *If it is not, you must update the software through John Deere.*
   • System Voltages – verify proper operation of components
   • Delivery System - recommended to blow air through flowmeter to verify
   • Section (valve) Status – verify all valves are listed
   • Sensors/Status – if installed, verify pressure sensor readings
   • Switches/Status – cycle implement height switch to verify operation

2  Select the Tests tab, and use the drop-down menu to verify the following:
   • Control Valve Test – cycle the valve between open and close 4 times to verify operation
   • Section (valve) Test – perform test as instructed on screen
   • Flowmeter Calibration – perform test as instructed on screen
   • Pressure Sensor Calibration – perform test as instructed on screen
**Special Notes:**

A.) There is a **limp-home** mode that can be used if a communication failure between the GS2 display and rate controller occurs. An in-line 10 amp fuse is located in the main PF90553 main extension harness that connects to the planter harness. The limp-home mode reverts back to rate 1, and assumes that the tractor is travelling at 5 mph.

B.) Tank refilling: if there is no tank level sensor installed, you will manually have to “refill” the tank on the main GS2 rate controller screen each time it is filled.

C.) The “Manual” button on the Main GS2 rate controller screen will run the pump for 8 seconds to help prime the system.

D.) If using a Raven flow meter, a RFM60P or RFM100P meter may be used but a #116270-01 adapter harness must be used, or the main harness modified. The pinouts for the supplied Microtrak flowmeter plug are as follows if you choose to modify your harness:

- Pin A = Signal
- Pin B = V +
- Pin C = Ground

The plug housing is a 3 pin Metri-Pack 150 tower.

**Important note:** some Raven flowmeter’s calibration numbers are per **10 gallons** instead of per **1 gallon**, so adjust the calibration number accordingly for your control.

**System Components:**

Other CDS-John blue components that are recommended for use with this kit are:

- **Exacto-Flow** flow dividers, available 6, 12, and 20 port models and available with adjustable spring tension for section balancing (FD-0610, FD-1210, & FD-2010)
- **Visagage Orifice Selectors**, available in sets of four or as single units (SMPT-OSA1 or SMPT-OSA4).
- **Visagage II** flow monitors, available in sets of four or as single columns (SMSSx OR SMFDx)
- **Serviceable Check Valves**, available with or without fittings (CV-1101, 1.0 psi)
<table>

<tr>
<th>ISSUE</th>
<th>POSSIBLE CAUSES</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pump/motor runs uncontrollably</td>
<td>Hydraulic flow is <strong>backwards</strong> entering the manifold “Outlet” port instead of the “Inlet” port. Check that rotation of the pump and/or motor is CLOCKWISE from the motor shaft (sprocket) end - reverse hydraulic flow if needed.</td>
</tr>
<tr>
<td></td>
<td>Hydraulic flow is too high – adjust tractor’s maximum flow to be 10 GPM.</td>
</tr>
<tr>
<td></td>
<td>PWM and ON/OFF valves are installed in wrong ports – valve with longer coil retaining nut is the ON/OFF valve (also has “SV” stamped on the stem hex body)</td>
</tr>
<tr>
<td>Pump/motor will not start</td>
<td>Ensure “Pump Enable” checkboxes are set correctly in the “PWM Setup” screen. Also check High and Low Limit settings.</td>
</tr>
<tr>
<td></td>
<td>Ensure the cable plugs labeled “PWM” and “ON/OFF” are attached to the correct valves. The PWM valve is closest to the INLET port.</td>
</tr>
<tr>
<td></td>
<td>An orifice is needed in INLET port of manifold if using a closed-center pressure compensating hydraulic system. Orifice size should be approx. 0.125”</td>
</tr>
<tr>
<td></td>
<td>Test to see if coil is getting power. Coil will be magnetic when powered on (may hold steel object close to it to test).</td>
</tr>
<tr>
<td></td>
<td>If running two drive systems systems in parallel, you may need to put orifices in the lines to make sure flow will go to each branch of the circuit.</td>
</tr>
<tr>
<td>Pump/motor will not stop when implement is lifted</td>
<td>Test resistance of implement switch contacts to make sure no current can pass when they are supposed to be “open”.</td>
</tr>

LIMITED WARRANTY

THIS WARRANTY IS IN LIEU OF ALL OTHER WRITTEN OR EXPRESS WARRANTIES AND REPRESENTATIONS. ANY IMPLIED WARRANTIES INCLUDING MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE ARE EXPRESSLY LIMITED TO THIS WRITTEN WARRANTY. CDS-JOHN BLUE COMPANY SHALL NOT BE LIABLE FOR CONSEQUENTIAL DAMAGES.

Use of this product for any purpose other than its original intent, abuse of the product, and/or any modification to the original product is strictly prohibited by the manufacturer, CDS-John Blue Company. Any modification to the product should be approved by CDS-John Blue Company prior to use. CDS-John Blue Company will deny Warranty claims and liability in any situation involving misuse, abuse or modification.

Each new machine or component manufactured by CDS-John Blue Company through original buyer is warranted by CDS-John Blue Company to buyer and to any party or parties to whom buyer may resell, lease or lend the equipment to be free from defects in material and workmanship under normal use and service. This obligation of CDS-John Blue Company under this warranty is limited to the repair or replacement of defective parts or correction of improper workmanship of any parts of such equipment which shall within one year from the date of CDS-John Blue’s original delivery thereof, be returned to CDS-John Blue’s factory, transportation charges prepaid and which CDS-John Blue Company shall determine to its satisfaction upon examination thereof to have been thus defective. When it is impractical to return the defective parts of such equipment to CDS-John Blue’s factory, then CDS-John Blue shall have no liability for the labor cost involved in repairing or replacing any such parts and shall be liable solely for supplying the material necessary to replace or repair the defective parts, provided that prior thereto CDS-John Blue Company shall have determined to its satisfaction that any such parts are thus defective.

This warranty shall not apply to any equipment which shall have been repaired or altered outside CDS-John Blue’s factory in any way so as to affect its durability, nor which has been subjected to misuse, abuse, negligence or accident, or operated in any manner other than in accordance with operating instructions provided by CDS-John Blue Company. This warranty does not extend to repairs made necessary by the use of inferior or unsuitable parts or accessories, or parts or accessories not recommended by CDS-John Blue Company.

CDS-John Blue Company makes no warranties in respect to parts, accessories or components not manufactured by CDS-John Blue Company, same ordinarily being warranted separately by their respective manufacturers.
